Instructions for Course VM Downloads

SUSE Technical Product Training

To run a local copy of the VM lab environment for the hands-on labs, you will need a dedicated machine that meets the specifications for the course you want to run. If you do not have one available, the labs are also available as recorded videos.

Accessing the Base Image and Course VM Files

You will need to be logged into your SUSE account prior to accessing the links below. For employees, you must first log into https://suse.okta.com and click on the SUSE Okta B2C link. If you are accessing this via the Litmos LMS, we recommend right clicking on the links below and opening them in a new tab/window for easy access back to the course.

Base Image

It is recommended to install SUSE Technical Training Course VMs on the latest openSUSE Leap 15 training lab base image. You can run multiple training lab environments on the base image. A video that demonstrates the installation of a lab machine from this image can be found here.

Course VM Files

To download the course VM files, navigate to the appropriate course folder in AWS VM Files bucket. A video that demonstrates the installation of one of these lab environments can be found here.

To download a single file:

- Click the checkbox for the file you want to download
- Go to the dropdown list and choose Actions
- Click on Download or Open

TIP: To download multiple files at once, use the Firefox browser, select all files in that folder and choose 'Open" button. Currently this only works in Firefox.
